

LUMINOUS

Overview Summary

Problem

Mobile astronomy apps have been extremely popular for smartphone users but holding your phone in front of you with your arm and hand in the way creates a physical obstruction in your point of view.

Solution

Imagine this, but with a new way of viewing the stars augmented right in front of your eyes, hands free for a breathtaking experience with no physical obstruction in the way. That's what Luminous is about: augmented stargazing with infinite wonder enhanced and provided with information beautifully.

Strengths

- First astronomy app without physical obstructions
- First astronomy app for “Glassware”
- Hands free! (Phones have limited amount of view), other technology isn’t augmented to view the night skies
- Constellations, stars, messier objects, satellites, what’s in our solar system, and special events augmented in first person
- Works without clear skies
- Learn in a interactive and engaging way
- Infinite wonder is enhanced with data

Weakness

- Possible eye fatigue for beginners

Opportunities

- New growing “Glassware” market
- Through sharing videos, photos, and hanging out, via online social media, it offers opportunity for advertising done by users and word of mouth

Threats

- Cost of Google Glass
- If first astronomy app for Glass, then competitors will rise

- Our target markets majority is geared toward male and female aged 18-40 (though not too specific). It can be educational for kids and recreational for teens and adults. It will be geared towards people who have Google Glass, interested in new technology, astronomy, discovery, and science.
- Possible users are explorers, campers, hikers, stargazers, ametuer astronomers, students, children, teens, adults, teachers, classrooms, and anyone curious of locating objects in the night sky, learning about them, and sharing what their experiences.

RESULTS FROM SURVEY MONKEY

Daisy

23 / Female

Daisy is a student majoring in illustration. She enjoys nature, writing, and is curious at heart.

Tasks: In Daisy's backyard, she wants to locate Mars, learn about it, and have it read to her.

Lauren

21 / Female

Lauren is majoring in psychology, enjoys helping others, yoga and admires discovery and science.

Tasks: Lauren wants to learn about the Hubble telescope, locate it, take a photo of her discovery, and share it to Facebook to show to her friends and family.

Brent

25 / Male

Brent is majoring in Visual Design, enjoys new gadgets, has an interest in space, discovery, science, and loves movies.

Tasks: Brent wants to display the special event, Perseids meteor shower, learn more about it, record it, and share the video to his followers on Twitter.

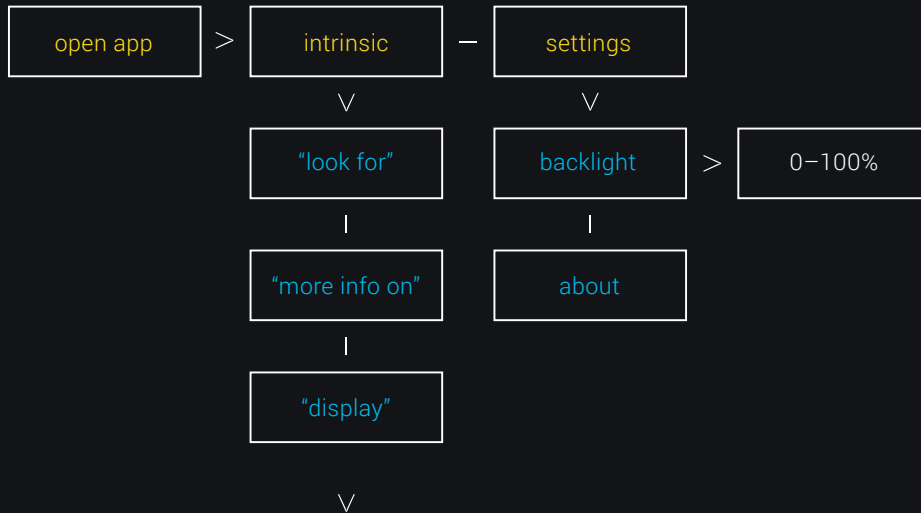

Sofronia

26 / Female

Sofronia has graduated college and is living with a couple roommates. She's spiritual and calm. Every so often she enjoys sky gazing from her apartment roof terrace.

Tasks: The night sky is a little visible tonight. Sofronia wants Luminous to display all the stars in her line of sight with names displayed and wants to hangout to share her view with her friend Brent.

Web Site "Get on Glass"

LUMINOUS

Gazing up at the night sky, we are in fact suspended in the infinity of space. We as human beings are forged from the molecules of stars, connected to each other and everything around us. Trillions of atoms self organize into a sentient mind that perceives itself and the cosmos.

GAZE UP TO THE LUMINOUS.
